Cactus UniView wins CTC development contract for modernization of conventional signaling

The contract includes development of a CTC-system (Centralized Traffic Control) for the specific conditions of conventional signaling for the Swedish rail network, according to the Swedish National Rail Administration – Trafikverket. Main contractor is Ansaldo STS Sweden AB.

Together with our earlier contract for developing a CTC according to ERTMS L2, this gives Cactus UniView valuable opportunities for the Swedish rail network.

Cactus UniView.

Every day our systems are used to operate vital infrastructure by more than 100 customers. Operations managed includes a major part of Swedens water production and distribution, large parts of the energy production and important railway lines. www.cactusuniview.se

The cactus was our inspiration when we named our company. The cactus thrives in environments with tough demands on flexibility, adaptability and resourcefulness. *Just like our systems.*
